

Freelance Software Development & Data Solutions

We build reliable software for startups, small businesses, founders, and teams that need practical digital products delivered with strong technical execution. Our work combines full-stack engineering, product thinking, automation, analytics, and scalable backend systems. From business websites and internal tools to data-driven platforms and custom software workflows, we handle projects end-to-end: planning, design coordination, development, integrations, deployment, and iterative improvements.

CORE ENGAGEMENTS

- MVPs and startup product builds
- Business websites with strong UX and clear conversion paths
- Internal dashboards and workflow software
- Custom APIs, backend architecture, and database design
- Automation tools and web/data scraping systems

SERVICES WE PROVIDE

Custom Web Applications

Professional websites, portals, dashboards, admin panels, booking systems, marketplace flows, and tailored business software.

Full-Stack Product Development

Frontend and backend delivery using modern stacks such as Next.js, React, Node.js, FastAPI, Flask, MongoDB, PostgreSQL, and REST APIs.

Mobile & Multi-Platform Solutions

Flutter-based app workflows, event management systems, companion apps, and connected web dashboards for operational teams.

AI, Automation & Smart Features

AI-assisted experiences, process automation, scraping pipelines, smart recommendation flows, 3D customization interfaces, and productivity tooling.

Data Analytics & Decision Systems

Dashboards, analytics tools, segmentation, reporting pipelines, KPI tracking, pricing intelligence, and business insight systems.

Performance-Critical Systems

High-speed data processing, backtesting engines, quantitative workflows, optimization pipelines, and scalable engineering for data-heavy products.

WHY CLIENTS WORK WITH US

Why Us

- Strong combination of software engineering, analytics, and product execution
- Hands-on experience across React, Next.js, Node.js, FastAPI, Flask, Flutter, Python, Rust, MongoDB, and PostgreSQL
- Experience building real-world systems for

Working Process

- Requirement discussion and scope definition
- Technical approach and timeline planning
- Development with regular progress updates
- Testing, deployment, and handover
- Post-launch support as needed

Professional Profiles & Project Fit

A combined team profile covering product development, data systems, automation, analytics, custom business tools, and

PROFESSIONAL PROFILES

FULL-STACK DEVELOPER | PRODUCT BUILDER

Om Ramanuj

Experience includes live product development, SEO-focused web delivery, mobile/web systems, hackathon-winning product builds, and modern frontend/backend implementation.

- Worked on Next.js and FastAPI products, appointment systems, video call workflows, and production deployments
- Led technical delivery across app and web solutions with Flutter and Node.js
- Built interactive products using React, Go, PostgreSQL, Three.js, and AI integrations

SOFTWARE ENGINEER | DATA & AUTOMATION SPECIALIST

Gopal Devmurari

Experience includes data-heavy software, algorithmic systems, analytics platforms, automation pipelines, and backend/API development with strong quantitative and problem-solving depth.

- Built trading systems, backtesting infrastructure, analytics tools, and high-performance Rust/Python workflows
- Developed scraping pipelines, compliance datasets, and REST APIs using Flask and FastAPI
- Delivers practical solutions that combine engineering, data analysis, and measurable business utility

WHAT WE CAN BUILD

Typical Project Types

- Business websites and premium landing pages
- Admin dashboards and internal tools
- Booking, marketplace, and portal systems
- AI-enabled product features and automation
- Analytics dashboards and reporting solutions
- Custom APIs, backend services, and data pipelines

Engagement Note

We are available for freelance software projects, tailored product builds, feature expansion, redesigns, maintenance, automation work, analytics systems, and specialized engineering tasks.

Commercial Terms

Payment and commercial terms can be discussed based on project requirements, scope, complexity, and timeline.
